

THE EU SUSTAINABLE COCOA PROGRAMME

In Cameroon

Unpacking the EU Deforestation Regulation for the cocoa sector

90% of global deforestation is driven by the expansion of agricultural land, contributing to climate change, biodiversity loss, soil erosion and desertification, and hindering sustainable development

Cocoa is one of the drivers of forest loss in Cameroon.

The European Union (EU) is a major consumer of cocoa.

Cameroon

In 2020, **Cameroon exported 65%** of the cocoa it produced to the EU

The EU is taking action to **minimise the risk that products associated with deforestation enter the EU market** and to increase the demand for deforestation-free products

The **EU Deforestation Regulation (EUDR)** requires companies to ensure that the products they place on the EU market or export from it are not associated with deforestation

The EUDR is expected to enter into application at the end of 2024

Chocolate
Paste
Beans
Powder
Butter, fat, oil
Shells

The EUDR does not create a country or product ban

It is non-discriminatory and will apply to selected products, either imported or produced into the EU

CATTLE

COCOA

COFFEE

PALM OIL

RUBBER

SOYA

WOOD

Derived products

The EUDR supports **Cameroon's sustainable cocoa objectives**. It will accelerate progress towards cocoa traceability and sustainability

To enter the EU, cocoa must be:

DEFORESTATION-FREE

Companies placing relevant products on the EU market must collect information showing:

The cocoa's origin (GPS information on plot*), suppliers and buyers

*GPS polygons for plots > 4 ha

To be submitted in a Due Diligence Statement

That cocoa does not come from land deforested after **31 December 2020**

Deforestation = conversion of forests into agricultural land, including cocoa-agroforestry systems

What's a forest?
The regulation uses an internationally-agreed definition from the FAO

Compliance with relevant Cameroonian laws on land, environment, human rights, Indigenous Peoples rights, labour, trade & taxes

Due diligence for companies consists of **3 steps**:

1	Collect evidence that the product is traceable, deforestation-free and legal	☒
2	Assess risks of non-compliance	☒
3	If risks have been identified, take action to mitigate them	☒

! If companies buy cocoa from a **low-risk area**, they only need to carry out the **first step**

A **benchmarking system** will categorise countries or regions according to **deforestation risk**. The frequency of EU Member States' **checks will vary consequently**:

Products from:	Obligations:	Frequency of checks:
LOW risk areas	Simplified due diligence	1%
STANDARD risk areas	full 3-step due diligence process	3%
HIGH risk areas	full 3-step due diligence process	9%

1. Map GPS locations of deforestation-free cocoa plots

2. Deforestation-free cocoa delivered to the first buyer, where it is kept segregated

3. Possible processing of deforestation-free cocoa into derived products

4. Deforestation-free cocoa or derived products segregated during export

EU

5. Importer or manufacturer in the EU processes or packages deforestation-free cocoa or cocoa products

6. EU retailer sells deforestation-free chocolate to consumers
