

SEDARI

Siap EUDR untuk Indonesia

What is SEDARI?

SEDARI: Siap EUDR untuk Indonesia, is a series of outreach events to communicate the European Union Regulation on Deforestation-free Products (EUDR) requirements, share knowledge and good practices, and facilitate discussions among sub-national stakeholders in Indonesia.

The events were conducted from **August to September 2025** by Saka Dala—a social enterprise working in partnership toward sustainable farm and forest products—on behalf of the European union in **eight districts¹** of **five provinces¹** that are Indonesia's major producing region of **natural rubber, cocoa, and coffee**.

¹ Banyuasin, Tapanuli Utara, Bandar Lampung, Lampung Tengah, Palu, Poso, Kapuas Hulu, and Pontianak

² North Sumatera, South Sumatera, Lampung, Central Sulawesi, West Kalimantan

Total Sessions	8
Offline Participants	456 (131 women)
Online Participants	171 (75 women)
Types of Participating Institutions	- National and Local government - Farmers organisations - Civil Society Organizations (CSOs) - Academia - Private sector

Key Findings

Below are the key points that reflect current Indonesia's sub-national readiness for EUDR implementation:

1. Smallholders face technical challenges before other barriers

Smallholders in coffee, cocoa, and rubber sectors face low productivity, aging crops, pest issues, and limited adoption of Good Agriculture Practices (GAP) due to weak farmer organizations and under-resourced technology transfer institutions. They now also need to meet sustainable agriculture demands and compliance with international trade requirements like EUDR.

2. Strong government support is essential

Smallholders urgently need national and sub-national government support to improve production and meet international trade requirements, including EUDR. Sustainable practices can help them access GAP technologies, increase productivity, and enter premium markets.

3. Strong willingness but uneven readiness

Farmers and local governments demonstrated strong motivation to prepare for EUDR, yet technical readiness, especially around geolocation mapping, land legality status, and data standardization, remains low.

4. Persistent barriers in Smallholder Plantation Registration Letter (Surat Tanda Daftar Budidaya/STDB) registration

Every session identified low STDB registration as a major bottleneck. Most plantation offices lack sufficient human resources, budget, or digital tools to process large numbers of farmer applications.

Outreach events participants' pre- and post-test result.

5. Legality and land tenure uncertainty

Legal clarity remains the most complex issue. Many smallholder plots fall within mixed zones: social forestry, protection forest, or overlapping concessions, making the process of verifying legality slow and fragmented.

6. Digital divide and traceability gaps

While private sector partners like JB Cocoa, Mars, Kirana Megatara, and several coffee exporters have developed digital traceability systems, integration with government data remains limited. There is growing consensus that public-private data sharing and interoperability is critical.

7. Policy alignment and decentralization challenges

EUDR-related preparation involves multiple ministries and local agencies. Participants across provinces raised the need for a national coordination platform to ensure that provincial efforts align with national regulations and EU expectations.

8. Inclusive participation

Women's participation was visible across sessions, particularly in coffee and cocoa farmer groups, though most lacked formal decision-making roles. Integrating gender-responsive approaches in outreach and training was recommended by several provincial offices.

Concrete Follow-up Actions

Province/District	Commodity	Follow up Actions
Banyuasin	Natural Rubber	Strengthen the Rubber Processing and Marketing Unit (<i>Unit Pengolahan dan Pemasaran Bokar/UPPB</i>)
North Tapanuli	Coffee	Deputy Head of North Tapanuli District will deploy 150 agricultural extension officers to train farmers on EUDR, after they are all trained on the essential of EUDR; improve land legality coordination for coffee agroforestry near forest areas; strengthen public-private collaboration on geolocation mapping and legality; continue WAG coordination via Saka Dala
Lampung & Central Lampung	Coffee, Cocoa, Natural Rubber	Farmer groups will collaborate with CSOs, while exporters will coordinate with government agencies (Plantation and Forestry Offices) to implement pilot projects for coffee and cocoa mapping; explore data-sharing frameworks; and facilitate land legality for coffee, cocoa, and rubber plantations located within forest areas
Central Sulawesi & Poso	Coffee, Cocoa	Under the coordination of the Provincial and District Development Planning Agencies (Bappeda), and in collaboration with local stakeholders, provincial and district working groups will be established to accelerate geolocation mapping and land legality readiness. These working groups will also support the synchronization of STDB, legality, and traceability systems with government programs on down-streaming plantation products
West Kalimantan & Kapuas Hulu	Natural Rubber	Under the coordination of the Provincial Plantation Office, the Governor-led multi-stakeholder forum will be reactivated, and district-level working groups will be established to accelerate geolocation and land legality readiness. The forum will also advocate for national government support to recognize rubber as a strategic commodity and allocate funding for rubber smallholder assistance.
Cross-cutting outcome	Establishment of WhatsApp communication group , fostering multi-stakeholders' cooperation , and aligning local actions with the national STDB program to support EUDR readiness. Participation in this group is by request, and the group is moderated by an expert from Saka Dala.	

Conclusion

The outreach established a common understanding on EUDR main requirements: deforestation-free production after December 2020, legal sourcing, geolocation traceability, and simplified due diligence reporting (annual Due Diligent Statement) for direct exporters to the EU market.

High appreciation and ownership: Local governments, farmer groups, private companies, and development partners valued the sessions as a timely response to EUDR implementation challenges.

Participants found the inputs clearer and more practical than previous national-level explanations: Especially regarding geolocation traceability and documentation requirements. Local actors are eager to build on this momentum through coordinated data collection and district-level mapping support. Several stakeholders, including the Plantation Office and local cooperatives, are ready to lead follow-up actions.

Improved awareness about STDB: Following the event, farmers and officials better understand e-STDB registration benefits and its linkage with EUDR readiness.
